Use AI Companion to compose text and generate images in Zoom Events

You can use AI Companion to help create throughout your workflow as you build your event.

Generate images for email, the event page, or in-event content

Save time and resources when you use AI Companion to generate images for emails, the event page, or in-event content.

When to use image generation

✅ Wherever you have the option of uploading an image, you can instead ask AI Companion to create an image from a prompt.

✅ You can be as specific as you want while you refine the images created. If you have a clear creative vision, be as specific as you can – or, if you want to explore different directions, you can be a little more generic with your prompt.

✅ Generated images are automatically saved to the hub content library and can be reused in other parts of that event or different events.

What to know

Zoom Events Image Generation with AI Companion is currently only supported in English and isn't available in all countries.

Compose event and session descriptions, speaker bios, lobby announcements, and more

Save time writing when you have AI Companion create the first draft. You can do this in any text field while you build your event.

When to use smart compose

✅ You can use Zoom Events Compose in any text field where you see the AI Companion icon ✦

✅ If the results aren't exactly right yet, you can edit it yourself or click **Make Longer, Make Shorter,** or **Change Tone to...**

What to know

Zoom Events Compose with AI Companion is currently only supported in English and isn't available in all countries.

Let attendees use AI Companion in the lobby chat

> **When attendees can use chat compose**
>
> ✅ As long as the host has a license and Zoom Events Compose with AI Companion is turned on, anyone attending the event can use AI Companion to respond to messages.
>
> ✅ In the chat panel of an event lobby, just click the ellipsis and then **Reply with AI Companion.**
>
> ✅ From here, you can provide a prompt or draft of what you want to say.
>
> ✅ If the results aren't exactly right yet, you can edit it yourself or click **Make Longer, Make Shorter,** or **Change Tone to...**
